Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The AIR polypeptides and polynucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polyendocrinopathy candidiasis
                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                           ectodermal dystrophy (APECED) (also known as autoimmune polyglandular syndrome type I (APS I)).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the human AIRE (or autoimmune polyglandular disease type 1, APGDI) polypeptide (see AAY06073). The overall identity between the mouse and human AIRE proteins is 72.378. Human mutated APGDI co-segregates with autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED). The murine homologue may be used to develop an animal model for APECED, to examine the events that lead to the development of APECED and possibly to develop agents for preventing and/or treating this autoimmune disease.
                                                                                       Autoimmune regulator-2; AIR-2; immune maturation; immune response;
                                                                                                                                                        24-JUN-1999
